

PCORE - Providing A Quick-Link To Savings & Convenience

Introduced in 1999, the Quick-Link™ Bushing...

- ◆ Is available in both PRC® and POC® technologies and has the convenience of a draw-lead bushing with the current capability of a bottom-connected bushing
- ◆ Allows bushings with current ratings up through 2,000 amps to be installed and removed from transformers without lowering the oil level in the transformer. This results in cost savings for the end-user
- ◆ Has a proven multiple contact connector that transfers current from the bottom terminal to the bushing conductor
- ◆ Can withstand short circuit current of up to 25 times the rated current
- ◆ Has been proven to maintain its full rating after more than 500 operations
- ◆ Has no internal connections that could loosen or overheat
- ◆ Needs no special tools or specific torque values for installation
- ◆ Has a rod that is much lighter than typical draw-leads or draw-rods, making installation and removal more convenient

For more information about our patented Quick-Link™ Bushings, contact your local representative, call our factory at 585-768-1200, or visit:
