

MEET THE TERMINATORS

ships from stock

broad inventory of
cable products

**15kV, 25kV and 35kV 200A
LOADBREAK ELBOW**
terminates and connects medium voltage
cables to transformers and switchgear.

**REDUCING TAP PLUG
(LRTP)** adds a 200 amp loadbreak interface to
existing 600 amp deadbreak interface. Also grounds and
isolates 600 amp systems.

ETP
provides as 200 amp loadbreak tap off a
600 amp T-body without the need for a
special threaded contact. Ideal for
retro-fitting existing equipment.

**BUSHING
EXTENDER**
600 amp bushing
extender increases the
distance between the apparatus and the location at which
cable enters the 600 amp elbow. Insulated and shielded to
protect deadfront integrity.

TapMaster™ JUNCTION gives single
junction for locating 200 and 600 amp
products together.

Backed with technical know-how

— YOUR SOURCE FOR UNDERGROUND HIGH VOLTAGE TERMINATIONS —

Quality you can count on.

**YOUR SOURCE
FOR
UNDERGROUND
HIGH VOLTAGE
TERMINATIONS**

DEADBREAK JUNCTIONS

sectionalize feeders or provide a lateral tap. Install in pad-mounted equipment or in subsurface vault applications. Fully-shielded. Fully-submersible.

600/900 AMPERE DEADBREAK ELBOW

Offer an easy and reliable method of terminating and splicing main feeder circuits. The 25kV deadbreak elbow is fully shielded and applicable for below-grade applications.

FEED-THRU BUSHING INSERTS

creates an extra tap position in an existing apparatus installation and converts a radial-feed transformer into a loop-feed unit.

**Low maintenance
underground distribution
cable products.**

INSULATING CAP

isolates unused 600 amp interfaces. Insulated and fully shielded to give submersible protection for energized 15 and 25kV deadbreak interfaces. ■
