

NEW CLAMP OFFERS MORE ADVANTAGES

All strain clamps are not created equal and this new ANDERSON™ strain clamp proves it. Look at the advantages, and you'll agree our new Cast Aluminum Straight Line Deadend Strain Clamp (Catalog Type ADEZ) is going to change the way you work on standard overhead distribution and light transmission construction with all- aluminum, ACSR or aluminum-alloy conductor.

We've engineered the ADEZ with workers in mind. The captive pivot point of the clamp eliminates the need for bolts to be tightened in a proper sequence to avoid clamp damage. That saves time. Hassle. And, helps ensure a proper installation every time. The side-opening, spring-loaded design provides captive nuts, preventing disassembly and hardware loss during installation on energized or deenergized lines. Conductor inserts into the clamp quickly and easily so workers can get onto the next task at hand.

Ease of installation. No parts to lose. That's what makes the ADEZ one of the best engineered clamps we've ever offered. Clamping will never be the same. Find out why with our new spring-loaded clamp. ■

Upgraded pivotal keeper design with cantilever clamping action eliminates internal friction between body and keeper during installation.

Add an "E" to the catalog number ADEZ, and we'll add a stainless-steel wire lifting eye to the clamp (ADEZ-E).
