

Good-Bye Electrical Tape . . . **HELLO “SNAP TAP”**

Quick application

plastic cover

for time-proven

connectors

With one snap, Anderson™ “Snap Taps” protect connections. Snap Tap makes protecting finished connections with electrical tape a thing of the past. Use a Snap Tap instead of tape. There’s no worry about labor intensive taping that can

loosen over time.

Most of these connections require contact sealant, making them even more difficult to tape. Not so with Snap Tap. With one snap, you get the protection you need from brush contact and resistance to grease and ultraviolet rays.

Snap Tap is a one-piece plastic design with no extra parts or hardware required. One hand “snap on” installation. No special tools needed. Three locking points secure Snap Tap over the connector for complete protection. Quick. Neat. Cost effective.

Use Snap Tap on your old and new connector installations. It has a life expectancy of 20-plus years and an operating temperature range from -20°F to 120°F. ■
