

APPLICATION PROFILE

QUAZITE® UNDERGROUND ENCLOSURES ARE SAFE, DEPENDABLE, AND ATTRACTIVE

Municipalities have depended on QUAZITE® enclosures for years now as the product of choice when providing electrical service in sidewalks and other non-deliberate vehicular traffic areas.

QUAZITE® enclosures offer many advantages for new and retrofit installations. The lightweight boxes are easy to install and are available in a wide variety of sizes to suit the individual requirements of each application. QUAZITE® enclosures are also extremely strong and provide years of maintenance-free service in even the most heavily used pedestrian areas. Pigments can be added to both the boxes and covers to match the color of the surrounding sidewalk or pavement and create an aesthetically pleasing effect.

Municipalities have chosen QUAZITE® enclosures for reasons of safety as well as performance. Most QUAZITE® enclosures sized through 30" x 48" are UL Listed to the ANSI/SCTE 77 2007 "Specification for Underground Enclosure Integrity" and meet the requirements in Section 314.30 of the 2008 NEC. End users can be assured that Quazite enclosures not only meet or exceed ANSI's National Standard, but have also been tested by a third party to verify their safety, reliability, and performance. The skid resistant covers add an extra factor of safety. The all-polymer concrete construction eliminates the need for grounding and greatly reduces the risk of electrocution if the electrical components inside the box are damaged.

TECHNICAL DATA

- Product: Sidewalk Service Enclosures
- Process: Closed mold casting utilizing matched surface tooling
- Materials: QUAZITE® precast polymer concrete
- Sizes: PC1212 — 12" x 12"
