

Water

CDR™ boxes, vaults and equipment pads are made with polymer concrete and hand lay-up fiberglass, making them the lightest and strongest in the industry. Boxes are available in both flared and straight wall design. Larger boxes and vaults are available with torsion assist covers for easy access and reduced risk of injury when servicing. Market applications: water meter boxes, reclaimed water, waste water treatment plants, lift station valve control boxes.

Hot Box® enclosures are designed for backflow prevention assemblies installed outdoors, above ground, to allow code-compliant valve installations. From aluminum to fiberglass; from one-piece lift off to 24 piece, 2,000 square foot modular; from simple squares to artificial rock or tree stump designs, Hot Box® is the industry leader in valve enclosure design and construction. Our wide variety of enclosures meet most standards and installation needs. From warm climate uninsulated Valve Guard® enclosures to cold climate insulated, heated Hot Box® enclosures, we have the enclosure you need.

Comcore™ manhole covers, road plates, trench covers, and shoring systems are made of a unique composite material that has no scrap value and eliminates the incentive for theft. Comcore™ products are non-corrosive, non-conductive, not affected by extreme weather, temperatures or UV rays and have a long life span for years of service free use. Light for easy transport and installation, Comcore™ products reduce the risk of injury associated with products made of traditional materials making Comcore™ products a more cost effective, safer alternative.
