

Right on speed . . .

Right on accuracy.

CHANCE[®] LoadLooker[®] ammeters

Fast, accurate and easy to use. The LoadLooker ammeter's U-shape jaw goes right on the conductor without mechanical connections. You read it directly on the digital display. No tables, charts, conversions.

It has only one operating button. One push turns on the LoadLooker. One more push makes it hold the next reading. It even turns off by itself after several idle minutes.

Save time, revenue and solve problems. In a matter of seconds, LoadLooker identifies the current load at any point on a circuit. Applications include balancing phases, selecting temporary hot-line jumpers, verifying current transformer ratios, and any application that benefits from measuring current quickly and accurately.

Seven LoadLooker models offer you these choices:

- Up to 69 kV range
- Up to 400 kV range
- Narrow jaw (1.89")
- Wide jaw (3.86")
- Averaging amps display
- True RMS amps display
