

Why Are You Still Using Porcelain . . .

... When Type PVN™ Station Class Arresters Are Available?

Ohio Brass's newest polymer arrester has arrived — Type PVN — the first U.S.-made, polymer-housed, MOV, station class surge arrester. Available for voltages 2.4 kV through 161 kV, Type PVN arresters can be mounted in horizontal, underhung, or the usual upright positions. PVN arresters are lighter, safer and easier to handle than porcelain arresters with the same capabilities.

All Type PVN arrester voltage ratings are single unit designs, so field assembly is not required. Of course, PVN arrester and porcelain-housed arrester mountings are interchangeable.

Call today for details on the latest "first" from Ohio Brass.

Benefits of Type PVN™ Station Class Surge Arresters

- A PVN unit is less than half the weight of porcelain-housed arresters. This makes transportation, handling and installation much easier.
- The ESP™ polymer housing makes the PVN arrester much safer than porcelain arresters.
- Single-unit, high voltage design provides improved contamination performance over multi-unit designs.
- ESP housing material in use on arresters for seven years of successful service in all climates.
- Mounting is simplified because of lightweight polymer housing: vertical, horizontal and underhung applications are possible.
- OB's experience in developing arresters:
 - First U.S.-made distribution, riser and intermediate class polymer-housed arresters, with over 3 million in service since 1986.
